

IN THE CLAIMS

Please amend claims 5, 7, 10, 13, 15 and 18 as follows and add new claims 21-22 as presented.

1.-4. (Previously Cancelled)

5. (Currently Amended) A paper layer coated in direct contact with a film of a conductive polymeric composition, said polymeric composition being a dried layer formed from an intermediate composition comprising an aqueous methyl methacrylate [[resin]] polymer base solution containing a quaternary ammonium compound in an amount of about 1 to about 10 wt% based on the weight of the composition, a polyethylene wax, ~~and optionally zinc oxide~~ said polymeric composition being deposited on said paper in an aqueous form and dried to form said film of polymeric composition to impart a static dissipative property and a conductive property to said paper layer.

6. (Previously Cancelled)

7. (Currently Amended) The paper layer of claim 5, wherein said intermediate composition further comprising an aqueous dispersion of zinc oxide particles.

8. (Previously Cancelled)

9. (Previously Cancelled)

10. (Currently Amended) A package comprising a ~~[[layer]]~~ film of a conductive polymeric composition, said polymeric composition being a dried layer formed from an intermediate composition comprising ~~a composition consisting of~~ an aqueous acrylic ~~[[resin]]~~ polymer base solution containing a quaternary ammonium compound in an amount of about 1 to about 10 wt.% based on the weight of the composition~~[[,]]~~ and polyethylene wax ~~and optionally zinc oxide~~; said polymeric composition being dried to form said film to impart a static dissipative property and a conductive property to said polymeric composition, which film of conductive polymer composition is in direct contact with at least one material selected from the group consisting of paper, fabric and non-woven material.

11. (Previously Presented) The package of claim 10, wherein said at least one material further comprises a metallized surface.

12. (Previously Presented) The package of claim 10, wherein the material is paper.

13. (Currently Amended) The package of claim 12, wherein said intermediate composition further ~~comprising~~ comprises an aqueous dispersion of zinc oxide particles.

14. (Previously Cancelled)

15. (Currently Amended) A laminate comprising:

an intermediate layer comprising at least two laminae, and on both sides of the intermediate layer as outer layers of the laminate,

a coating, the coating comprising:

a dried form of an aqueous acrylic [[resin]] polymer base solution containing a quaternary ammonium compound in an amount of about 1 to about 10 wt% based on the weight of the coating, and a polyethylene wax emulsion.

16. (Previously Presented) The laminate of claim 15, wherein said at least one said at least two laminae are independently selected from the group consisting of plastic, fabric, non-woven material or paper.

17. (Previously Presented) The laminate of claim 15, wherein at least one of said at least two laminae has a metallicized surface.

18. (Currently amended) The laminate of claim 15, wherein said ~~coating~~ aqueous acrylic polymer base further comprises at least an aqueous dispersion of zinc oxide.

19. (Previously Cancelled)

20. (Previously Presented) A package comprising the laminate of claim 15.

21. (New) The package of claim 10, wherein the acrylic polymer is methyl methacrylate.
22. (New) The package of claim 15, wherein the acrylic polymer is methyl methacrylate.
